Archaeological information in the digital society
Arkeologisk information i det digitala samhället

”It’s kind of really important to preserve archaeology

Empirical work

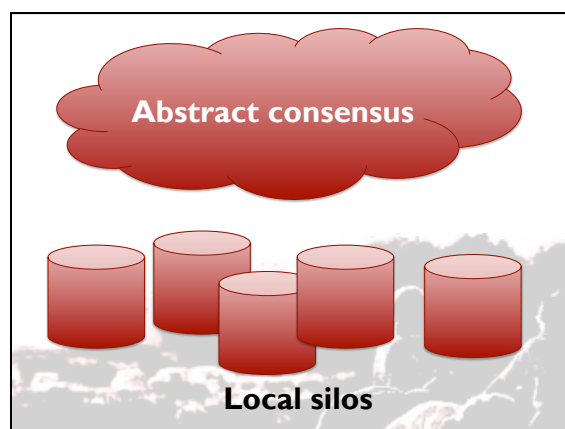

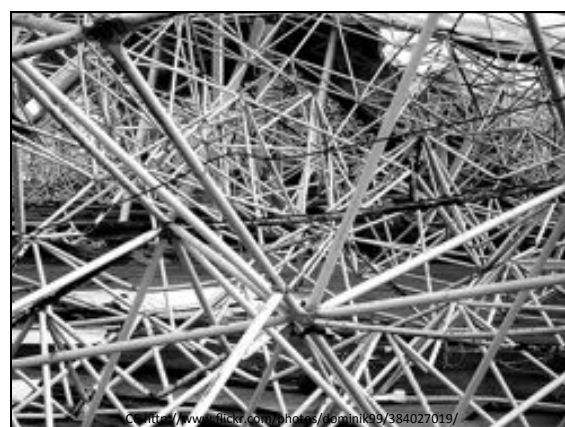

- Interviews of 16 Swedish professionals with interest in "archiving archaeology"
- Conducted 10/2013-4/2014
- Selective sample, snowballing

What does it mean to preserve and keep archeology?

What is happening versus what should be happening?

So?

Sure, a simple process with clear responsibilities.

But also, more explicit (and tangible) ideas(s) of product(s) and outcome(s)

...and an idea of a supply-chain and customerships.

**Process and appropriation in
the digitalisation of
archaeological archives and
archiving practices**
